engineering, from the Petrobras University. Today, he works in the oil and gas field, with innovation and digital transformation projects at Petrobras.

Synara Bezerra Pereira is a student of renewable energy engineering at Federal University of Paraíba, João Pessoa, Brazil. Her main research background is heat conduction in anisotropic media.

She worked in a project to teach renewable energies fundamentals to children at a public school in the city João Pessoa, Brazil.

Erlon Rabelo Cordeiro was graduated in mechanical engineering and phD in industrial engineering. He researches the use of composite materials (polymeric and biological) as corrosive protective coatings in structural steels. He also studies the use of industrial waste, evaluating the behavior and efficiency of these materials when subjected to new applications.

He is a professor at the Federal University of the São Francisco Valley, a professor at the academic collegiate of mechanical engineering. He maintains partnerships with researchers from the Federal University of Bahia and the Federal University of Paraíba, Brazil.

Márcio Rodrigo de Araújo Souza is an adjunct professor in the Department of Renewable Energy Engineering at Federal University of Paraíba, Brazil. His main research area of interest is computational mechanics with emphasis on the development of robust numerical formulations applied to the simulation of heterogeneous and anisotropic petroleum reservoirs. Other secondary research interests include simulation of damage in cementitious material submitted to the carbonation process and simulation of aerodynamic effects in horizontal-axis wind turbines.

Souza has authored and coauthored some papers in refereed conference proceedings and journals, respectively. He recently finished his PhD degree studies in simulation and management of petroleum reservoirs at Federal University of Pernambuco, Brazil.
